*Technoflex, Incorporated is a full service company offering quality, leading edge technology. We are dedicated to keeping our customers up to date with the latest advancements and innovations within the industry. All the companies that we represent are at the forefront in their particular fields and have a proven track record for the highest standards in quality and service.*

**TECHNOFLEX, INC:** Technoflex, Inc. has now purchased the EZ line of anilox cleaning equipment and supplies from S&B Equipment Corp. The E-Z Cleaner system is an inexpensive, cost effective tool for the cleaning all types of anilox and coating rolls utilized in the Tissue and Corrugating industries. The unit can be used for cleaning chrome & ceramic anilox rollers, glue rolls and even embossing rolls, giving added life and consistent quality.

**PACKAGING PLAST:** Packaging Plast is a state of the art manufacturing company dedicated the supply of equipment and parts to the Flexographic, Rotogravure and Coating and Laminating industries. Packaging Plast was born from a need for high precision quality products. PP started with the design and manufacture of molded anti-static plastic components for the gravure industry and later with aluminum, plastic and now carbon fiber blade systems. Unlike aluminum, carbon fiber is totally inert and will not corrode, does not warp or twist and is 300% more rigid than aluminum and up to 70% lighter.

**BST Eltromat:** A division of BST Eltromat International and world leader in the design, manufacture and implementation of video inspection, register control and web guiding systems for all markets. They have continually developed systems that meet the challenges of an ever-changing market place. Their units give customers the ease of use that BST have been synonymous with for over 30 years. In an ever changing market and market demands, BST have always supplied the best and most technically advanced systems on the market. Whether it is 100% defect detection, basic viewing or advanced web guide applications, BST is able to offer equipment to match or exceed your specific needs.

**ATLAS CONVERTING EQUIPMENT LTD:** Atlas Converting Equipment Ltd was established in 1976 and specializes in the design and manufacture of primary and secondary slitter rewinders for a wide range of flexible materials including plain film and metalized plastic film, lablestock, paper & board. The company's dramatic success has made it one of the most successful manufacturers and a world leader in slitting & rewinding technology for the global converting industry.

**UTECO CONVERTING S.P.A:** Is a leading manufacturer and supplier of equipment in the field of flexible packaging. Established in 1985, they have grown to become the largest Italian manufacturer of flexographic presses. Innovation has always been a key-point at Uteco, not only in the design and creation of leading edge equipment, but also with the ability to tailor machines to the specific needs of converters in any corner of the world. Their designers and production executives are constantly looking for new ideas and manufacturing processes to exceed customer's expectations. Uteco quality is therefore built in from the initial design of each machine and throughout all manufacturing steps.

**INKSPEC:** Are known for their innovations in viscosity control and their latest design brings a new level to control and implementation. The first of its kind WebBox allows the operator and Manager to view the viscosity system via any network linked device.

**JNC:** Are synonymous with strobe units and have made some major advancements over the past few years. With both handheld and machine mount units for print and UV detection JNC have you covered.
